1 Not all mobile devices are tested. Please check epson.com for the full list of supported devices.

2 Consult your user manual for input combinations.

3 Check your owner's manual to determine if a wireless LAN module must be purchased separately to enable wireless connection on your Epson projector. Epson projectors can be networked either through the Ethernet port on the projector (check model specifications for availability) or via a wireless connection. Not all Epson projectors are able to be networked. Availability varies depending on model.

4 Overnight shipping not available in all areas. Road Service orders must be in by 3 p.m. Eastern Time for Next Business Day delivery.

5 Color brightness (color light output) and white brightness (white light output) will vary depending on usage conditions. Color light output measured in accordance with IDMS 15.4; white light output measured in accordance with ISO 21118.

6 Lamp life will vary depending upon mode selected, environmental conditions and usage. Lamp brightness decreases over time.

Are you still doing meetings the old-school way? Do you have a love/hate relationship with your whiteboard?

Everyone loves their whiteboard because it is so simple and easy to use — until you want to share what's on it. Then, you feel the pain of being stuck in an analog world, when every other device we depend on is digital. Not to mention that when you use a whiteboard, you run out of space and you can't insert images.

Stop taking pictures of the notes on your whiteboard or painting entire rooms with whiteboard paint.

Reinvent your whiteboard!

Step into the modern age with BrightLink Pro. Turn your existing whiteboard, wall or table into an efficient, interactive area.

- It works just like your dry-erase board, digitally. Turn it on and start writing
- Add a digital page when you run out of space
- Insert an image or other content you want to include
- Connect from mobile devices[1]
- Share the notes instantly when you're finished; use the email, save and print functions — all without a computer

BrightLink Pro reinvents the whiteboard for today's workforce, making meetings more efficient and collaboration within the room or across the globe easier than ever.

All projected screen images are simulated.

Can’t see it? Too many meeting tools?

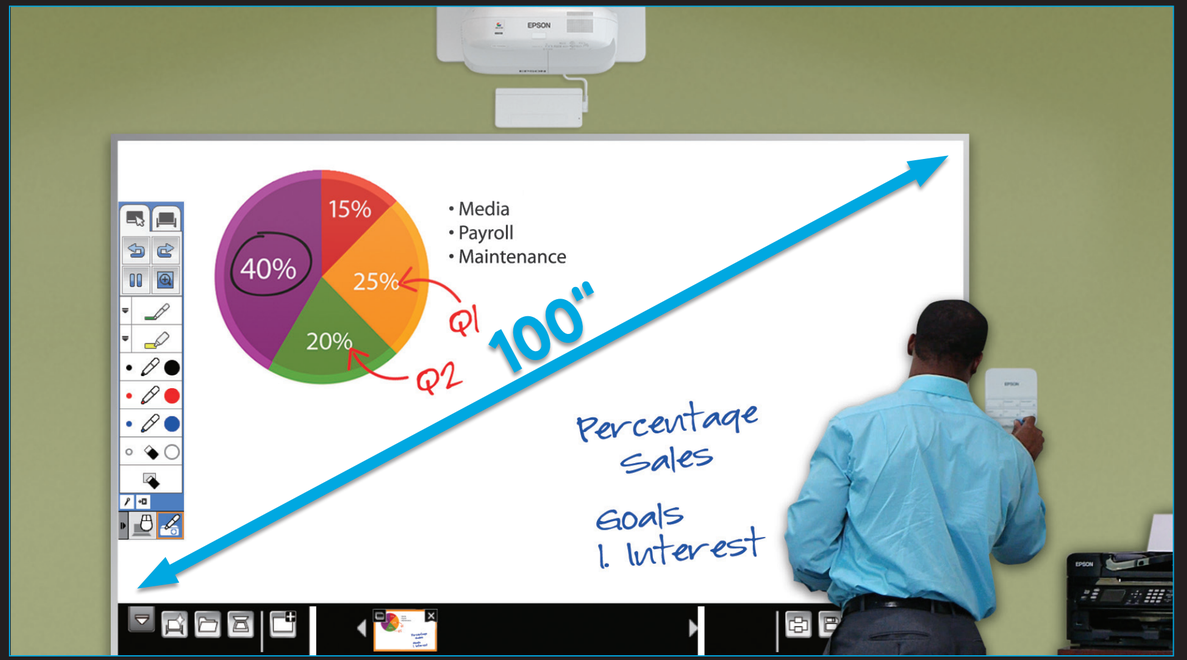
The importance of readability is something you learn the hard way — when you are struggling to read the quarterly report. Smaller displays are good for videos and photos, but text and charts require larger fonts.

Are you investing in all those typical meeting tools — a whiteboard, a flip chart, a projector, a flat-panel display and your laptop — but can’t find a way to make them work together?

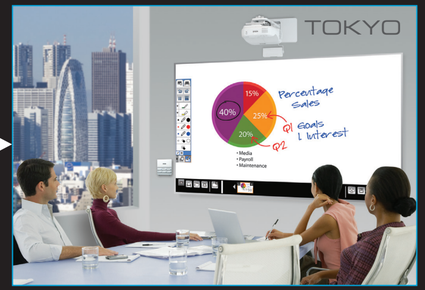
Bring them together in one device.

BrightLink Pro consolidates the utility of whiteboards, projectors and interactive displays. It is easy to install, works in well-lit rooms, and provides a large display area to share and show content from and with various participants.

Enjoy a full 100" display — 3x as big as a 60" flat panel — for an optimal viewing experience and clear readability from as far as 18' away.



LOS ANGELES



Share your whiteboard.

Write. Share. Collaborate. In real time from multiple devices, anywhere.

Work together, even if you're not in the same room.

Connect from the same network — or if you are working remotely, use VPN and join the meeting from your computer, mobile device or another BrightLink Pro. See what everyone else is seeing, share content with others, and download the notes at the end of the meeting.

Share your content with up to 15 other devices.

For even more effective meetings, share your whiteboard with up to 15 devices[1], including:

- Any supported mobile device with a web browser
- Any other BrightLink Pro 1420Wi or 1430Wi

Unified communications/video conferencing display.

Use BrightLink Pro as a 100" display with your unified communications and other video conferencing applications:

- Use it with computer-based solutions such as WebEx®, GoToMeeting® or Microsoft® Lync®
- Also works with standalone systems such as Polycom®, Lifesize®, Cisco® or Lync Room Solution Systems
- Or, simply plug your video conferencing equipment into the BrightLink Pro

Split Screen for more productive meetings.

There are big benefits with a large image. With the Split Screen[2] feature, you can project two images (video or stills) side-by-side from two different sources simultaneously. You can also choose from three layout options, swap images, or select the source for the audio.

LAYOUT OPTION 1:
50–50% Split Screen

LAYOUT OPTION 2:
Main image on the left

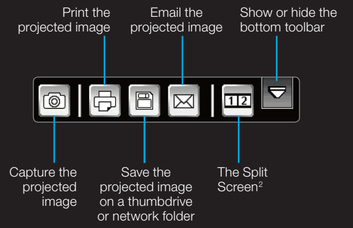
LAYOUT OPTION 3:
Main image on the right

BYOD and easily collaborate.

Bring your own device and connect to BrightLink Pro to share your content with others. Connect your iPad®, iPhone®, iPod®, Android™ device or computer wirelessly.[3] You can even join a whiteboarding session remotely using your mobile device and collaborate. And, when the meeting is finished, there's no need to take a picture of the notes. Simply download, email, save or print them.

Made for iPod iPhone iPad

No PC Required



Print the projected image
Email the projected image
Show or hide the bottom toolbar
Capture the projected image
Save the projected image on a thumbdrive or network folder
The Split Screen[2]

Perfect for huddle spaces.

Are you constantly searching for a place to hold quick, impromptu meetings? Is the conference room always taken? Install a BrightLink Pro on any blank wall — in the cafeteria, common area or huddle space — and there you have it. The perfect place to have ad hoc discussions, share content from your laptop or mobile device[1], or even collaborate remotely with those out in the field.

It’s all at your fingertips with Finger Touch.

Turn your whiteboard into a giant tablet. The BrightLink Pro 1430Wi is finger-touch-enabled, so in addition to pens, it allows you to use your fingers to enlarge, scroll, swipe and do other familiar gestures.

Fully compatible with your computer.

Though it doesn’t require a computer to work, BrightLink Pro can be connected to your computer. Either connect a USB cable from your computer to BrightLink Pro, or use Epson® EasyMP® Network Projection software to interact wirelessly[3]. Basically, you can do everything you typically do on your computer — all on your whiteboard. The board becomes your monitor, and the pen or your finger becomes your mouse.

Turn any flat surface into an interactive area.

Why be limited by the area of your existing whiteboard? BrightLink Pro can be used to turn any plain wall, table or existing whiteboard into an interactive area. It's the perfect solution, whatever the task at hand. And, you don't need a dedicated area. Use it on any blank space — in hospitality areas, restaurants, and more.

Attach the table mount to a regular or drafting table to use BrightLink Pro for an array for engineering, training and creative applications.

Bring premium design to your boardroom or office.

BrightLink Pro offers an optional all-in-one mount, available in a sleek aluminum finish. It comes with a whiteboard, frame, mount and valance and is available in 87" and 100" diagonal sizes.

Epson projector sold separately. All-in-one mount option sold separately from Chief Mounts.
Visit www.chiefmfg.com for more information.

Epson iProjection™ App[3].

Easily display and navigate documents, photos, web pages and other files wirelessly. Move about the room and effortlessly display content from your mobile device on the big screen.

Apple®, iOS® supported formats and files: Microsoft® Word, Microsoft® PowerPoint®, Microsoft® Excel®, Keynote®, Adobe® PDF, JPG and PNG

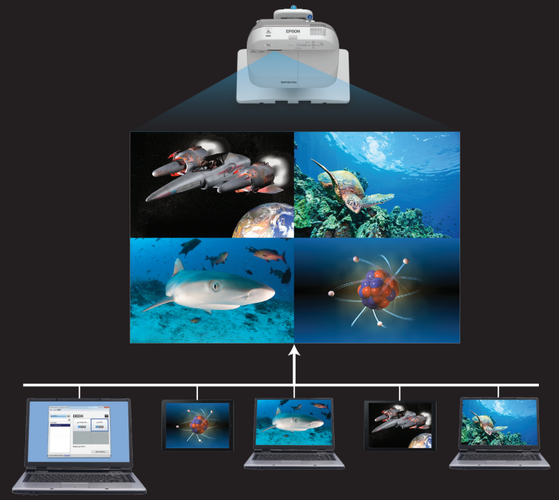
Android supported formats and files: Adobe PDF (PDF 1.7), JPG/JPEG and PNG

Find out how to set up the app and learn more about your product and device compatibility at epson.com/projectorapp

Multi-PC projection with Moderator feature.

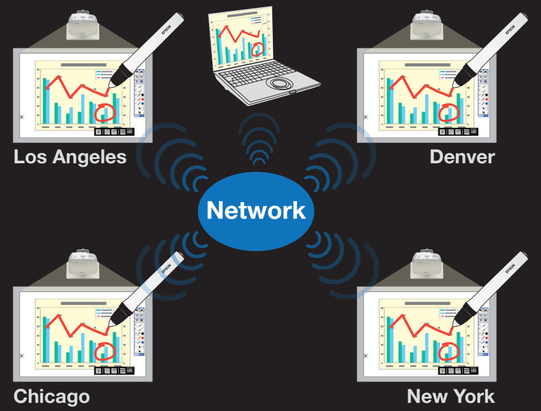
Epson's Multi-PC utility allows you to display four PC screens simultaneously over the network, with even more users connected to BrightLink Pros on Standby Mode. The moderator can drag and drop participants into or out of the four quadrants and control which device screens to display.

- Connect up to 50 Windows®, Mac®, iOS or Android devices
- Encourage and control collaboration; perfect for comparing ideas side-by-side



Remote collaboration.

BrightLink Pro enables you to share content across the network. Project your content at other locations using up to three more BrightLink Pros. All four BrightLink Pros enable users to annotate on the projected image — and annotations are visible at all four locations, resulting in more productive meetings.



Convenient management and control functions.

Attach BrightLink Pro to your LAN via a wired or wireless[3] connection. Using EasyMP Monitor software, IT administrators can configure and monitor the status of their Epson networked products, including the remote viewing of power status, lamp hours and temperature/filter conditions.

Schedule function.

This convenient feature allows you to easily control the BrightLink Pro at non-networked venues. The embedded "clock" inside the device enables it to perform scheduled tasks without having the network Standby Mode on. This saves energy, as it can be turned off when not in use.

Peace-of-mind ownership.

When you buy an Epson product, it's backed by our industry-leading service and support. It's called the Epson Road Service Program, and if anything goes wrong with your product while it's under warranty, we'll send another unit the Next Business Day[4] to the United States or Canada, absolutely free of charge. Of course, we can offer such impressive service because Epson delivers road-tested reliability — which means it's unlikely you'll need it.

Advanced connectivity.

BrightLink Pro features two HDMI® inputs, one with MHL®, for high-definition digital video and audio. It also includes VGA, video and USB inputs. Attach it to your LAN via a wired or wireless[3] connection and present visual and audio content over the network, where multiple users can present and share ideas.

BrightLink Pro 1430Wi with Finger Touch

Interfaces

HDMI x 2 (one MHL)
